

The third park area is located along the main section of Marlowe's Creek from Roxboro Cotton Mill south to the Allgood Street area. This recreation facility will serve a large portion of the township's eastern area which, at present, does not have an organized park. As shown on the Development Plan, the park is approximately 80 acres in size. It will serve and be most beneficial to those properties which are directly adjacent or within a short walking distance. Because of the length of the park it is recommended that a network of walkways and bicycle paths be worked out. Those areas of the park which are located near the concentrations of population should be more intensively developed by installing swings, slides, tennis courts, and similar play equipment. As was the case in the two parks described above, a large portion of this proposed park would be located within the flood plain of a nearby creek. This park will serve all of the people now living in the eastern section of Roxboro.

The fourth proposed recreation site is located to the west of the Collins & Aikman plant, beginning at the northern boundary of the township and ending just north of Ridge Road, near Person Memorial Hospital. This park is approximately 120 acres in size and would serve those people living in the Longhurst-Cavel area. Due to the length of the facility, walkways and bicycle paths should be provided throughout. The extent to which this park is actively developed will depend upon how many persons choose to build homes in this area. Active development of the park may tend to be slowed because of the existing ball fields located on Park Street and behind Collins & Aikman.

The fifth proposed park north of Chub Lake Road, extends from Chub Lake Road to S.R. 1351, west of Cavel. This
